

ABSTRACT OF THE DISCLOSURE

A video recording/reproducing apparatus with tuner includes a microcomputer. The microcomputer determines as to having-station/having-no-station on CH3 and CH4 that usually have no station in the U. S. A. and then sets a frequency of a channel
5 determined as having-no-channel to an RF modulating circuit. The microcomputer also sets a frequency of CH3 or CH4 to the RF modulator circuit 22 in response to manual operation by an operator only when both CH3 and CH4 are determined as having-station. This processing is implemented prior to the processing for tuner preset.
